disorder;

```
The present invention relates to new NOVX polypeptiues. The invention of treating or preventing a NOVX-associated disorder such as CC cardiomyopathy or atherosclerosis, where the disorder is related to cell cignal processing and metabolic pathway modulation in a subject, CC preferably human. The invention is also useful for treating metabolic CC disorders (e.g. Alzheimer's disease, parkinson's disease), immune CC disorders, haematopoietic disorders and various cancers. The molecules of CC the invention are also useful for treating or preventing cirrhosis, CC pancreatitis, learning and memory defects, infertility, congenital heart CC defects, acne, hair growth, pigmentation disorders, endocrine disorders, cc reurological disease, gastro-incestinal diseases, reproductive, health, CC neurological disease, pone marrow transplantation, endocrine disorders. CC callergy and inflammation, nephrological disorders, urinary system CC disorders, neuropsychiatric disorders and age-related disorders.

ZACRP4 protein has two complement factor C1q domains. The ZACRP4 gene is located on human chromosome 11q11. The ZACRP4 coding sequence and protein have a number of uses described in the specification, including, modulatation of energy balance and cellular metabolic reactions in mammals. In addition, ZACRP4 protein is useful as an autocrine factor, particularly during
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; zacrp4; complement factor Clq domain; chromosome 11q11; energy balance; cellular metabolic reaction; autocrine factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human ZACRP4
                                                                                                                                                                                                                                                                                                                                                                                                      protein is useful as an autocrine factor, particularly during development, in mediating the processes of an organism, in regulating cellular processes such as cell proliferation and/or differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Domain

Novel isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease ő

Claim 1; Page 30; 318pp; English

useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, preferably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkingon's disease), immune disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, pancreatitis, learning and memory defects, infertility, congenital heart defects, acne, hair growth, pigmentation disorders, endocrine disorders, cespiratory disease, gastro-intestinal diseases, reproductive, health, neurological diseases, reproductive, health, allergy and inflammation, nephrological disorders, urinary system consorders, neuropsychiatic disorders, urinary system consorders, neuropsychiatic disorders and age-related disorders. The present invention relates to new NOVX polypeptides. The invention

Tang . Ku Y, `e EA, New human secreted proteins and nucleic acids useful in diagnosing, treating and preventing cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, and developmental disorders -Yang, Yue H, Ga (ang J, Than Richardson Thangavelu dson TW, Ba Baughn Yao MG, Warren BA, D: Lal PG, Honchell CD, hn MR, Elliott VS; Ding L, Duggan Br ), Walia NK, Lee s

BM;

Claim 1; Page 140; 158pp; English.

The invention relates to twenty four human secreted proteins (SECP1-24), proteins 90% identical to them and active fragments of them. (CR Also included are nucleic acids encoding the SECP proteins, a recombinant polynucleotide comprising a promoter sequence operably linked to the convergence of convergence of the comprising the recombinant polynucleotide, and can transgenic organism comprising the recombinant polynucleotide, and convergence of convergence of the convergence of the convergence of the convergence of convergence of the conver recombinant

TANGO 275, TANGO 300 and MANGO 245 proteins. The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autolmmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins, useful in the treatment of inflammatory diseases (e.g. idiopathic ulcerative colitis), tumors, renal disorders and live.

The ORFX CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipacviatic; antiparkinsonian; noctropic; neuropyotective; continuous that; cardiant; thrombolytic; coagulant; vasotropic; coaminostimulant; cardiant; thrombolytic; coagulant; vasotropic; cc antiinfammatory; antibacterial; antiviral; antifungal; antirheumatic; cardiant antibacterial; antiviral; antifungal; antirheumatic; cc antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; cc antithyroid; and antianaemic. The sequences can be used for determining cc pathological conditions associated with an ORFX-associated disorder. The couleic acids can be used to express ORFX proteins in gene therapy coefficies. The proteins and nucleic acids may be used to treat cancers, cordiferative disorders, neurodegenerative disorders, osteoarthritis, cc proliferative disorders, neurodegenerative disorders, osteoarthritis, cc graft vs host disease, cardiovascular disease, diabetes mellitus, conjection, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, collarics anament human woman and carrilare damane.

Novel isolated NOVX polypeptide useful for treating cardiomyopathy, atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease cancer disease, anorexia, neurodegenerative or

Claim 1; Page 28; 318pp; English

The present invention relates to new NOVX polypeptides. The invention is cuseful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell cising processing and metabolic pathway modulation in a subject, competerably human. The invention is also useful for treating metabolic cising processing and metabolic pathway modulation in a subject, considered (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, parkinson's disease, immune considered (e.g. Alzheimer's disease, parkinson's disease), infertility, congenital heart constitute, learning and memory defects, infertility, congenital heart constitute, learning and memory defects, infertility, congenital heart constitute, acne, hair growth, pigmentation disorders, endocrine diseases, consupposital diseases, reproductive, health, consupration diseases, bone marrow transplantation, endocrine diseases, consupposition disorders, uninary system constituted diseases, endocrine diseases, and age-related disorders. amino acid sequence represents a NOVX protein

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: The first component of complement is a calcium-dependent complex of the three ivation of C1r (enzyme), C1s (proenzyme), and the other eight components of complement.

C;Comment: The C1q subcomponent is composed of nine subunits, six of which are disulfidedimers of the C chain. Equimolar amounts of the A, B, and C chains are found after reductions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT
